Profile (<https://ansonpoh-portfolio.vercel.app/>)

Year 3 Software Engineering student at Singapore Management University specializing in full-stack web development. Experienced in designing scalable, user-focused applications using modern frameworks. Driven to solve complex problems through clean, efficient code and collaborative development.

Education

Singapore Management University (SMU) – *Bachelor of Science (Software Engineering)*

GPA: **3.6/4**

Expected Graduation: May 2028

Skills

Technical Skills: Python · Java · JavaScript · TypeScript · React · Vue · Node.js · Express.js
Spring Boot · SQL · PHP · Git · Docker · Kafka.

Soft skills: Analytical Problem Solving · Collaboration · Communication.

Projects (github.com/ansonpoh/)

AI Safety Hivemind (Python, NextJS, Supabase)

- An AI-powered public safety platform that collects incident reports from people and routes them to the right agencies
- Combines live reports with risk signals to support faster and smarter responses.

VolunteerConnect App (React, Supabase, Express)

- Built a full-stack volunteer-matching platform with AI-driven recommendations and organiser-volunteer workflow.
- Integrated analytics dashboards, interactive maps, and a custom LLM assistant to enhance user engagement and decision-making.

Alpha 67 (Phaser 3, Vite, Java 21, Spring Boot, Supabase)

- Game-based learning platform that teaches Gen Alpha culture through interactive maps, NPC encounters, and quiz-based combat with progression, social features and a microservices backend.
- Applied AI to content generation, moderation, question-bank drafting, reflection review, chatbot support, and guided quiz hints.

RAG Service (Python, Neon)

- Built a **multi-tenant RAG backend** using **FastAPI**, JWT authentication, async document ingestion, and multi-format file support.
- Implemented **vector/hybrid search** with **PostgreSQL + pgvector**, plus streaming chat, health checks, metrics, and automated tests.
